

PRASHANT BELANI

Senior Cross-Platform Engineer & Mobile Architect *Location:* Ahmedabad, Gujarat, India

LinkedIn www.linkedin.com/in/prashant-belani-252b5341

Specialization: Flutter, iOS, Swift, Enterprise Ecosystems & Multi-Tenant Architectures

PROFESSIONAL SUMMARY

Architect and Senior Mobile Developer with over 12 years of expertise specializing in high-performance, cross-platform applications (iOS, Android). Recognized history of taking complex business landscapes and ranging from hardware-integrated restaurant & retail POS systems and secure FinTech trading applications to regulated aviation systems and multi-tenant EdTech software and scaling them into robust production deployments serving thousands of active global users. Expert in offline-first design, interactive state synchronization, strict data payload controls, and smooth, responsive UI architectures.

CORE COMPETENCIES & TECHNICAL SKILLS

- **Mobile Development:** Flutter, Dart, Swift, iOS SDK, Android SDK
- **Architecture & State Management:** Provider, Offline-first Architecture, Multi-tenant Systems
- **Data Architecture:** API-Driven Content Delivery, High-Frequency Caching, Real-Time Progress Trackers, WebSockets, REST APIs
- **Security & Hardware:** ESC/POS Thermal Printing(Bluetooth, USB, Wifi) Barcode/QR Scanning, Weighing Scales
- **User Experience:** Highly Responsive Design, Touch UI Optimizations, Rich Analytical Charting, Complex State Management (Provider)
- **Version Control:** GitHub, Bitbucket, Git Lab
- **Database:** Realm, Core Data, SQLite
- **Dependency Management:** Pubspec, CocoaPods, Swift Package Manager
- **Notification:** Firebase, Firebase Cloud Messaging (FCM), Push Notifications
- **Parsing:** JSON Serialization, XML
- **Deployment:** App Store Deployment, Google Play Deployment

FEATURED PROJECT PORTFOLIO

1. Royal POS – Cross-Platform Restaurant & Retail Management System

- **Role:** Lead Architect & Senior Flutter Engineer
- **Technologies:** Flutter, Android, iOS, WebSockets, Hardware Integration, AWS S3
- **Cross-Platform Single Codebase:** Engineered a unified production codebase delivering identical, latency-optimized UX across iOS, Android, Windows desktop, and Mac platforms.

- **Hardware Communication Layer:** Programmed driver service layers enabling native peripheral communications for ESC/POS thermal printers, scanners, and weighing scales.
- **Robust Offline Synchronization:** Created a local-first system ensuring continuous operational billing during infrastructure network drops, complete with automated transaction queue processing.
- **Impact Scale:** Single codebase successfully scaled to power 7,500+ active commercial business locations globally.
- **Playstore:** <https://play.google.com/store/apps/details?id=com.royalpos.royalpos2024>
- **Appstore:** <https://apps.apple.com/in/app/royal-pos/id1466916523>

2. TestTrek – Competitive Exam Preparation Application

- **Role:** Mobile Architect & Flutter Developer
- **Technologies:** Flutter, Dart, EdTech Engine, API Content Delivery, Analytical Dashboards
- **Digital Assessment Architecture:** Engineered a scalable, high-performance competitive exam application supporting thousands of concurrent active students navigating mock tests and dynamic assessments.
- **API-Driven Document Engine:** Constructed an efficient content routing layer for instant on-demand retrieval of rich educational media, current affairs modules, embedded e-books, and archival previous-year paper resources.
- **Granular Progress Diagnostics:** Architected structured internal state matrices tracking real-time student activity patterns, calculating topic scoring variations, and populating data-dense historical chart components.
- **Device-Adaptive Interfacing:** Authored fluid, highly responsive presentation layers providing perfectly balanced screen utilization across various smartphone sizes, tablet viewports, and configurations.
- **Playstore:** https://play.google.com/store/apps/details?id=com.vbtech.testtrek&hl=en_IN

3. UnlistedZone – Fintech Investment & Portfolio Management Application

- **Role:** Senior Flutter Developer
- **Technologies:** Flutter, Dart, Fintech Trading, Market Charting, Secure Session Architecture, REST API
- **Pre-IPO Trading Ecosystem:** Formulated and developed a full-scale cross-platform FinTech app focused on streamlining investments into equity-grade unlisted shares and pre-IPO instruments.
- **Data-Dense Portfolio Controls:** Implemented responsive equity statement blocks tracking real-time asset valuation, profit/loss indices, and localized financial research media distribution feeds.
- **Transactional Integrity:** Hardened API communication parameters to guarantee transaction routing workflows and sensitive customer holdings declarations remain highly secure.

- **Playstore:** <https://play.google.com/store/apps/details?id=com.unlistedzone.android&hl=en> IN
- **Appstore:** <https://apps.apple.com/in/app/unlistedzone/id1640469608>

4. LevelFlight Mobile – Aviation Operations Management Application

- **Role:** Mobile Solutions Engineer
- **Technologies:** Flutter, Dart, iOS, Android, Offline Document Sync, Secure Storage
- **Aviation EFB Workflow:** Co-architected a mission-critical mobile solution designed for pilots and flight crews, systematically replacing traditional paper-based cockpit binders with an Electronic Flight Bag (EFB) platform.
- **Offline-First Technical Manuals:** Designed a resilient local document container caching structure to provide instantaneous, uninterrupted pilot access to digital manuals, maintenance records, and flight logs mid-flight without network dependencies.
- **Real-Time Operation Sync:** Integrated complex data layers with core aviation backend environments to securely pipe, upload, and update live duty records, logs, and flight profiles.
- **Regulatory Data Handling:** Enforced rigorous encryption and security guidelines across the device storage sandbox, ensuring complete parameters governing operational documents match strict security thresholds.

5. Classic Valet Kuwait – Driver Companion Application

- **Role:** Senior Flutter Engineer
- **Technologies:** Flutter, Dart, Android, iOS, Barcode Integration, Logistics Mapping, REST API
- **Valet Operations Engine:** Conceptualized and engineered a mobile driver utility app designed to track vehicle cycles from drop-off check-in to secure lot allocation and final key delivery.
- **High-Speed Ticket Processing:** Incorporated hardware-accelerated camera scanning for immediate parsing of barcode physical tickets, reducing guest onboarding check-in times.
- **Real-Time Mission Routing:** Orchestrated immediate operational state sync using persistent API back-channels, guaranteeing drivers receive push tasks, dynamic parking assignments, and recall requests instantly.
- **Optimized Driver Interface:** Authored a highly focused, distraction-free workflow UI built for low-light conditions and quick outdoor interactions to maximize operational accuracy.
- **Playstore:** <https://play.google.com/store/apps/details?id=com.classicvaletkuwait.app&hl=en>
- **Appstore:** <https://apps.apple.com/kw/app/classic-valet/id6466197831>

6. RoyalPOS Self Kiosk – Self-Service Restaurant Ordering Kiosk

- **Role:** Lead Engineer & Mobile Architect
- **Technologies:** Flutter, Dart, Android, Windows, Touch UI Optimization, REST API, Local Cache Storage

- **Self-Service Automation:** Created a highly stable kiosk frontend across Android and Windows to manage independent guest-facing checkout loops, minimize customer wait times, and reduce counter friction.
- **Granular Item Modifiers:** Formed an interactive menu configuration framework enabling high-performance item variations, deep modifier nesting, and multimedia asset asset loading tailored explicitly for large-format touchscreens.
- **Receipt System Integration:** Tied customer inputs to immediate local network ticket printers and generated dynamic verification codes upon invoice confirmation.
- **Playstore:** <https://play.google.com/store/apps/details?id=com.royalpos.captoself>
